The horses and ponies that are not intended to serve for food production will be sold as seen and they feature the following essential characteristics at the time of delivery, which are also subject-matter of the contract of sale:

I. External characteristics:

1. The pedigree as stated in the catalogue.

The pedigrees stated in the catalogue are based upon breeding certificate of origin which is handed over to the buyer.

2. Sex, coloring and year of birth as stated in the catalogue.

Any pictures of the horses and ponies in the auction catalogue as well as the respective captions classifying the respective horses, ponies and foals - also in respect of their main talents such as dressage/ show jumping/ or as an event horse - do not constitute the characteristics but are merely founded on notifications of the exhibitors and on personal impressions gathered at the time when the catalogue was printed. This information is no guarantee for any specific abilities of the horse. The seller's purpose for the foals up for sale is the presentation for the auction. To fulfill this use the foals have been made used to wearing a head collar, being transported in the horse box/lorry, having (partly) been shown publicly with the mother, having (partly) been injected vaccinations and dewormers, having been shown to the farrier and underwent a presentation in front of the selection committee.

II. State of health

1. Horses

The horses offered for sale have been clinically examined and x-rayed in preparation for the auction before delivery. The x-rays for warmblood horses have been taken according to the „Guidance for the radiological evaluation within the vet exam of the horse“ (Röntgen-Leitfaden 2018).

The following x-rays have been taken according to „Guidance for the radiological evaluation within the vet exam of the horse“ (Röntgen-Leitfaden 2018) with exposed marks in the x-ray, the horse being sedated and horse shoes taken off:

(In German according to the Röntgen-Leitfaden 2018)

- Vordergliedmaße (jeweils beidseitig)
- Huf 90° / Zehe 90° / Huf 0° nach Oxspring (mit Abbildung des Fesselgelenkspaltes)
- Hintergliedmaße (jeweils beidseitig)
- Zehe 90° / Sprunggelenk 0° / Sprunggelenk ca. 45° / Sprunggelenk ca. 135° / Knie ca. 90° / Knie 180°

For Ponys instead the following x-rays have been taken with exposed marks in the x-ray, the horse being sedated and horse shoes taken off (German terms of x-rays):

- Zehe vorne beiderseits (ca. 90°) und Oxspring (mit Abbildung des Fesselgelenkspaltes)
- Zehe hinten beiderseits (ca. 90°)
- Sprunggelenk beiderseits (ca. 45°, ca. 115°)
- Knie beiderseits (ca. 110°)

The findings of this clinical examination have been set out in a veterinary examination protocol that is available for public inspection at the veterinary office. The above mentioned x-rays will not be evaluated but can be viewed together with the written examination protocol of the clinical examination during the whole preparation of the auction. Bidders can have the x-rays explained to them by a veterinary surgeon of their choice or by the two auction veterinary surgeons. The result in the form of the objective diagnosis of the written examination report which exclusively relates to the clinical examination is open for public inspection as well as the state of the horse shown on the x-rays constitute the health of the horse / pony and the buyer is aware of the fact that the x-rays only show standard projections which cannot include all radiological findings. Further veterinary evaluations beyond this are not subject-matter of the quality agreement. The Association does not establish any further quality features of the horses in view of performance, health or other character-

ristics of the horses. They are therefore not subject-matter of the sale contract.

2. Foals

The foals offered for sale have been examined neither clinically nor radiological. However, the foals have been submitted to a veterinary examination on the day of auction which is restricted to a visual examination in view of the ascertainable state of health as well as possible deviations of the teeth and the testis. On the day of the auction the written results of the veterinary examination are available for inspection in the auctioneer's offices where they can be consulted any time. The quality agreement constituting the subject matter of the sale is reduced to the content of the veterinarian certificate as well as to the "external quality features" listed in paragraph B. I. Any further external characteristics, health or performance wise, of the foal have not been determined and are not part of the sales contract. The auctioneer will notify all potential customers prior the auction if there are any changes to the catalog description or any current health issues of the foal.

The seller (association) as well as the exhibitor expressly assumes no guarantee. This applies in particular to certain characteristics of the horse / foal / pony or uses. The parties agree that the further development and further skills of the horse / pony / foal are not foreseeable. Any verbal statements made by the seller / association concerning the assignment of the horse as a riding, sporting and breeding horse and with regard to its predominant enduring suitability do not represent any quality features, but are based on subjective impressions.
